

MHP SCRAPER MANAGEMENT

MHP scraper management is a bespoke system for your application.

- > Examines your system and recommends the most appropriate equipment for satisfactory spillage control and belt cleaning.
- > Installs and commissions the equipment for optimum performance according to the relevant design requirements.
- > Establishes an effective inspection regime to note routine maintenance requirements.
- > Provides regular reports of required maintenance to allow advance control of costs.
- > Records trends of wear, damage and causes of failure and establishes appropriate maintenance schedules for each scraper.
- > Recommends and carries out improvements on the basis of the observed trends.
- > Carries out regular, planned maintenance.
- > Compiles comprehensive historical data for use in planning and budgeting.

The benefits are obvious.

- > Improved plant management.
- > Reduced breakdown and lost production time.
- > Minimised spillage and clean-up costs.
- > Targets maintenance to best effect.
- > Full traceability of service costs.
- > Improved budgeting.
- > Rationalisation of equipment types and reduced spares inventory.
