

ABRAGRIP MINI-DIAMOND LAGGING

Abragrip lagging for pulleys and idlers on conveyor systems is easy to apply and has been proven under all types of operating conditions.

The lagging's high resistance to wear and corrosion significantly increases the pulley or idler service life which means less down time and more production.

Our range of abragrip mini-diamond drum lagging comes in different thicknesses and at a standard width of 2000 mm.

It is a cost-efficient solution that offers maximum grip, performance and durability.

PRODUCT ADVANTAGES AND APPLICATION

- Helps evacuate moisture and dirt.
- Protects pulley from wear and corrosion.
- Reduces slippage between belt and pulley through an increased friction coefficient.
- Easy application, even to pulleys in situ.
- Avoidance of material build-up.
- Can be supplied in different rubber grades on customer demand.
