

MHP STAR TRACKER ROLLER

Spillage is often caused by belt misalignment before the tail pulley, resulting in off-centre loading. This can also cause belt mis-tracking and subsequent edge damage.

The MHP STAR TRACKER roller is a new design which realigns the belt automatically by means of patented, tapered rollers without distorting the belt itself.

- > Aligns belt before tail pulley
- > Prevents off-centre loading
- > Fully automatic operation
- > No external power required.

MHP CONVEYOR COVERS

- > MHP conveyor covers are a simple and easy-to-fit cover system, incorporating mild steel hoops with powder coating.
- > The covers are made from a light-weight, robust UV stable plastic.
- > Reduced downtime for installation means lower installation costs.
- > The cover system incorporates a quick release system to enable easy access to replace rollers or carry out regular maintenance.
- > Effective means of reducing dust emissions.

The conveyor covers are made to order and can be designed in house to suit all requirements.
